

Summary of ECD Global Alliance chat held on Saturday 11th September 2010

8 Present:

- A patient who has a balance problem finds that, when sitting in a chair, they lean noticeably to one side. Several patients on the chat also have problems with balance; one patient mentioned that they also lean to one side when sitting. One patient finds that their balance is worse when they lose sleep or their fentanyl patch is low.
- A patient on Gleevec continues to do well and has good energy levels.
- Members interested in obtaining assistance with prescription costs from pharmaceutical companies may find the following sites useful:
