

## **Summary of ECD Global Alliance Internet Chat**

**31 Dec 2016**

5 Attendees

- A very short Chat. These are the only "news" components.
- This week the UK member's "excuse" was that the Chat was on New Year's Eve AND Saturday night at the SAME TIME!! It was already getting dark in the UK.
- A French member has received some news from tests of his intestines. It appears that there might be the beginnings of cancer. He said that these were ECD related tumors, and not in the common places (bones, lungs, and kidneys). He is due to see Professor Haroche in Paris in the next week. If this is related to his ECD treatment then he may need to change. His current treatment is kineret.
